EXP. NO: 13

Date:- 24/9/26

Demonstrate network forensics using pcap xray tool

Aim:-

To perform network forensics by analyzing a packet perform capture (pcap) file using the PCAP X-Ray tool to identify network protocols, suspicious activities, communication patterns, transferred files and security indications.

Software:-

- windows / Linux operations system
- web browser
- PCAP X-Ray
- sample PCAP

Step 1:- obtain a PCAP file

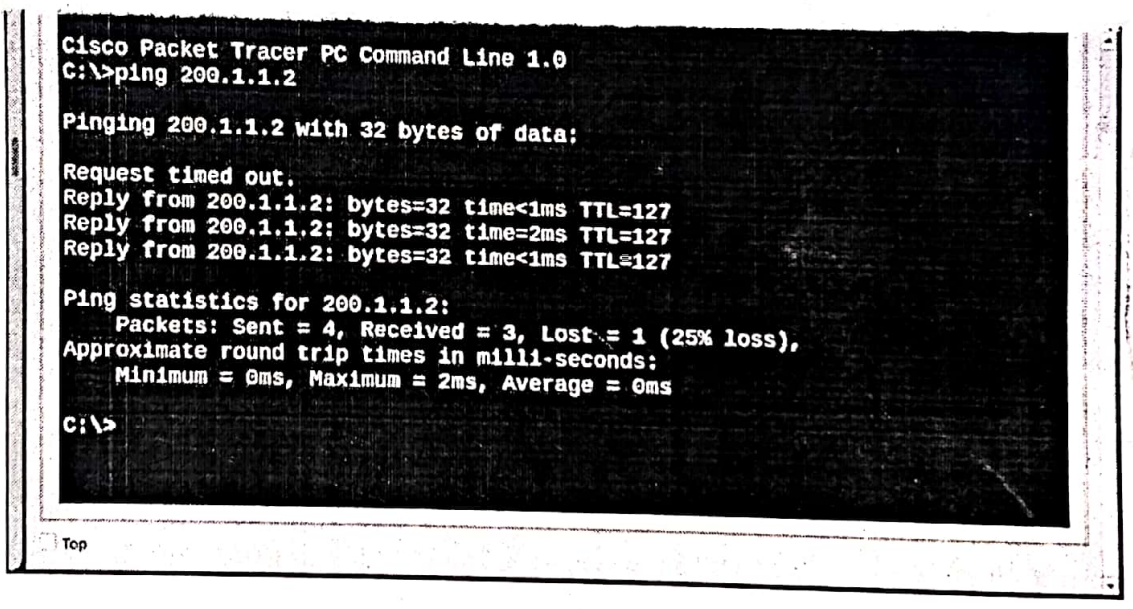

option 1: capture your own traffic

option 2: Download a sample PCAP.

Step 2:- open the PCAP X-Ray Tool

step 3:- upload the PCAP file.

Scanned with OKEN Scanner

Scanned with OKEN Scanner

Step 3:- Upload the PCAP File

Step 4:- View the Dashboard After Processing

the dashboard displays:

- Total Packets.
- Total Protocols
- Source IP address
- Destination IP address
- Communication statistics

Step 5:- Analyze protocol Distribution

open the protocols section.

Step 6:- Examine source and Destination Hosts

open the Hosts or Endpoints section

Step 7:- Analyze DNS Queries

Navigate to the DNS section.

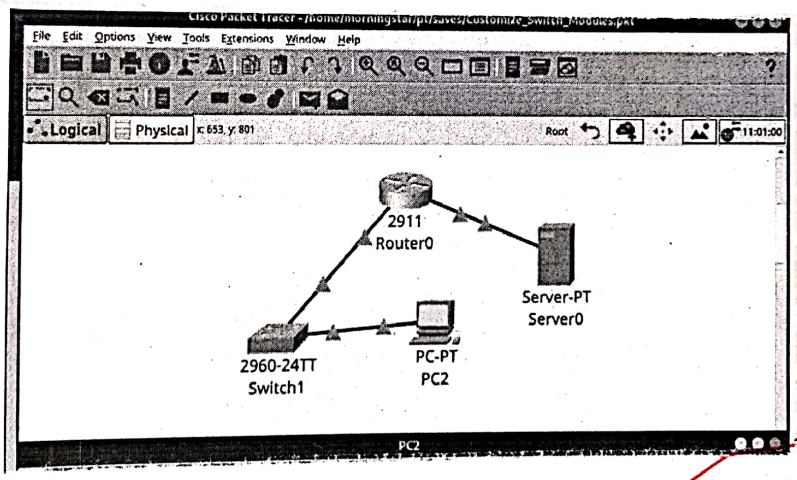

Step 8:- Inspect HTTP Requests

open the HTTP sections.

Step 9:- Review TLS / HTTPS sessions

open the TLS/SSL section.

Scanned with OKEN Scanner

Scanned with OKEN Scanner

step 10:- Inspect Conversation

open the conversation section

step 11:- Check for credentials

If supported, open the credentials sections.

step 12:- Extra files

open the file section

- Images.
- PDF
- ZIP

step 13:- Identify security Indicators

step 14:- view the Timeline

step 15:- Generate the Report

Result:-

Network forensics was successfully demonstrated using the PCAP X-ray tool by analyzing packet capture (PCAP) files, identifying network traffic patterns.
