To capture, save, and analyze network traffic on TCP / UDP / IP / HTTP / ARP / DHCP / ICMP / DNS using wireshark tool

Aim:

To capture, save, and analyse network traffic of TCP, UDP, IP, HTTP, ARP, DHCP, ICMP, and DNS protocols using the wireshark network protocols analyzer.

Software Require

- Operating system : windows 10 / 11
- wireshark
- Internet Connection
- Administrator privileges.
- Web Browser
- Terminal

Procedure:

Step 1:- Install wireshark

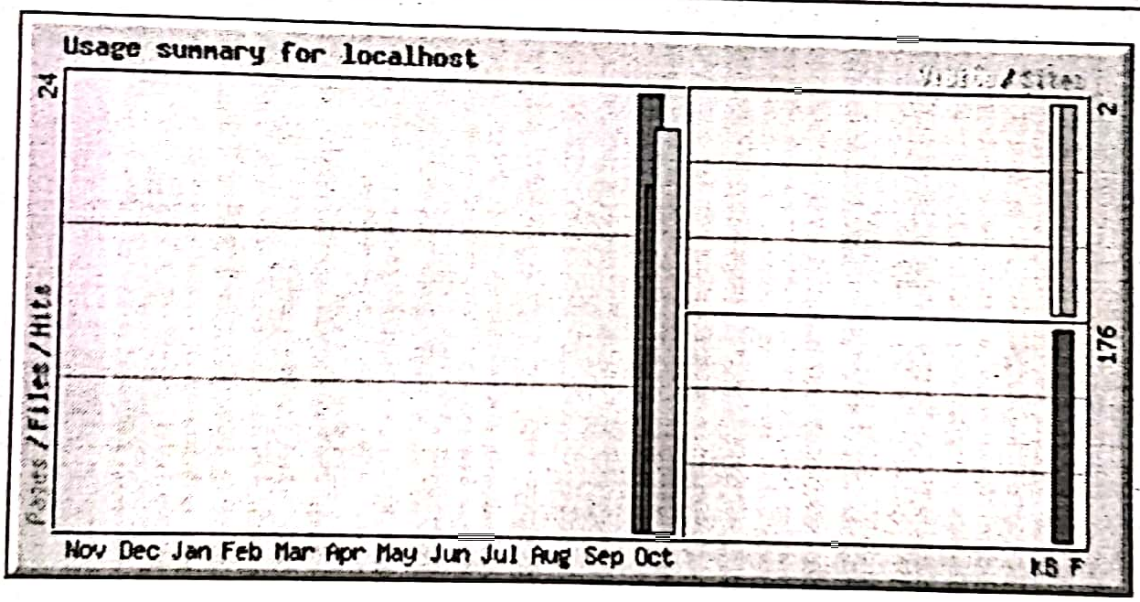

Step 2:- Open wireshark

Step 5:- Generate Network Traffic

Part A - Capture ICMP Packets

Generate Traffic

Ping google.com

Part B - Capture DNS Packet

www.google.com

Apply filter

DNS

Part C:- Capture HTTP Packets

Scanned with OKEN Scanner

Part D :- capture TCP Packets

Part E :- capture UDP Packets

Part F :- capture ARP Packets

Part G :- capture DHCP Packets

Part H :- capture IP Packets

Step 6 :- Stop Packet capture

Step 7 :- Save capture file.

Step 8 :- open saved file

Step 9 :- Analyze Packet Details

Result :-

Thus, network traffic was successfully captured, saved and analyzed using the wireshark tool, the TCP, UDP, IP, HTTP, ARP, DHCP, ICMP, and DNS protocol were identified and examined using suitable display filters.
