Webalizer tool

Aim:

To install, configure, and use the webalizer tool to analyze web server log files and generate statistical reports for different types of web servers.

Software requirements:-

- operating system: Ubuntu Linux
- Apache web server
- webalizer tool
- terminal
- web browser.

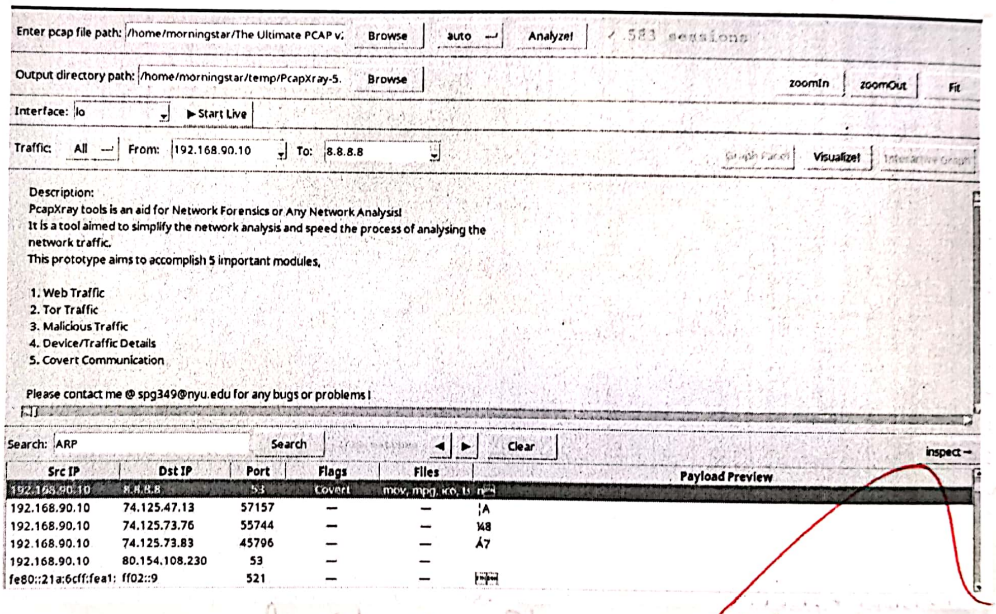

Theory:

Webalizer is an open-source web log analysis tool used to generate graphical and statistical reports from web server log files. It process access logs generated by web servers and provides detailed information about website usage.

Webalizer supports log files from:

- Apache HTTP server
- Nginx web server
- IIS
- FTP servers
- Proxy servers.

Step 1: Update the system :-

```
sudo apt update
sudo apt upgrade -y
```

Step 2:- Install Apache web server

```
sudo apt install apache2 -y
apache2 -v
sudo systemctl status apache2
sudo systemctl start apache2
sudo systemctl enable apache2
```

Step 3:- Verify Apache server

```
http://localhost
```

Step 4:- Generate web traffic

1. Refresh the Apache homepage several times.
2. Open different pages on the website.
3. Access the website from another computer.

Step 5:- Locate Apache log file.

```
cd /var/log/apache2
ls
access.log
error.log
tail access.log
```

step 6: Install Webalizer

sudo apt install webalizer -y

webalizer -V

step 7:- sudo nano /etc/webalizer/webalizer.conf

save the file

Exit the editor

step 8: Create the output Directory

step 9:- Generate the Report

step 10:- View the Generate Report

step 11:- Analyze the Reports

monthly statistics

Daily statistics

Hourly statistics

Browser statistics

operating system statistics

Referrer statistics

search keyboard statistics

HTTP status code Analysis.

Result:- Thus the different types of servers were successfully analyzed using the Webalizer tool. The analysis helped understand server performance and user access patterns.
