Exp No: 3

Date: 23/7/26 Learning and Assignment of IP address manually to Computer.

Aim:-

To understand the IP addressing schema and manually assign static and manually address to computer on a network.

Procedure:-

* In windows: open Network and Sharing center
  change adapter setting → right click
  local area connections → preperation →
  IPV4 → set up manually.

* Enter IP address: 192.168.1.10, subject mark: 255.255.255 Default gateway: 192.168.1.1

* Enter DNS server: 8.8.8.8 (noogle Device)
  click ok

* In Linux : use command 'studio' route
  add: 192.168.1.10/24 dev etho'

* for set gateway in Linux: IP routes add default via 192.168.1.1

* for persistent configuration using ipconfig on 'ip D'

* Ping the default gateway to config network connectivity.

Scanned with OKEN Scanner

* ping another computers on the same to verify communication.

command / code:-

* sudo ip add 192.168.1.10/24 sudo ip route add default via 192.168.1.1 ip a show eth0.

ping 192.168.1.1

nmdi con mod "Weird connection" ipv4 address 192.168.10/24,

nmdi con mod "Weird connection" ipv4, gateway 192.168.1.1,

nmdi con mod "Wired Connection", ipv4 method manual.

nmdi con up 'Weired connection 1".

Result:-

Static IP address were successfully assigned to computers. connectivity was verified using ping command between hosts on the same student.
